The Independent Institute of Education (Pty) Ltd is registered with the Department of Higher Education and Training as a private higher education institution under the Higher Education Act, 1997 (reg. no. 2007/HE07/002). Company registration number: 1987/004754/07.

DID YOU KNOW?

Student Portal

The full-service Student Portal provides you with access to your academic administrative information, including:

- an online calendar,
- timetable,
- academic results,
- module content,
- financial account, and so much more!

Module Guides or Module Manuals

When you log into the Student Portal, the 'Module Information' page displays the 'Module Purpose' and 'Textbook Information' including the online 'Module Guides or 'Module Manuals' and assignments for each module for which you are registered.

Supplementary Materials

For certain modules, electronic supplementary material is available to you via the 'Supplementary Module Material' link.

Module Discussion Forum

The 'Module Discussion Forum' may be used by your lecturer to discuss any topics with you related to any supplementary materials and activities such as ICE, etc.

To view, print and annotate these related PDF documents, download Adobe Reader at following link below:

www.adobe.com/products/reader.html

IIE Library Online Databases

The following Library Online Databases are available. These links will prompt you for a username and password. Use the same username and password as for student portal. Please contact your librarian if you are unable to access any of these. Here are links to some of the databases:

Library Website	This library website gives access to various online resources and study support guides [Link]
LibraryConnect (OPAC)	The Online Public Access Catalogue. Here you will be able to search for books that are available in all the IIE campus libraries. [Link]
EBSCOhost	This database contains full text online articles. [Link]
EBSCO eBook Collection	This database contains full text online eBooks. [Link]
SABINET	This database will provide you with books available in other libraries across South Africa. [Link]
DOAJ	DOAJ is an online directory that indexes and provides access to high quality, open access, peer-reviewed journals. [Link]
DOAB	Directory of open access books. [Link]
IIESPACE	The IIE open access research repository [Link]
Emerald	Emerald Insight [Link]
HeinOnline	Law database [Link]
JutaStat	Law database [Link]

1. Introduction

An essential part of The Independent Institute of Education (The IIE) qualifications is to prepare students for the World of Work. The key differences between WIL modules and all other modules in a qualification is that, in the WIL module, you need to use all the knowledge and skills that you have developed in all your modules up to that point and further develop your abilities to reflect on yourself and your peers.

2. The Purpose of WIL

The purpose of having a WIL module in a qualification is to bring together all the knowledge and skills gained into one consolidated project thereby enabling you, the student, to integrate what you have learnt in several modules and demonstrate that you are able to apply it to solve a workplace type problem. Through the WIL Modules additional attention can be given to what SAQA calls Critical Crossfield Outcomes (CCFOs) or what is now more generally known internationally as global competencies.

- CCFO1:** Identify and solve problems in which responses demonstrate that responsible decisions using critical and creative thinking have been made.
- CCFO2:** Work effectively with others as a member of a team, group, organisation, community.
- CCFO3:** Organise and manage oneself and one's activities responsibly and effectively.
- CCFO4:** Collect, analyse, organise and critically evaluate information.
- CCFO5:** Communicate effectively using visual, mathematical and/or language skills in the modes of oral and/or written presentation.
- CCFO6:** Use science and technology effectively and critically, showing responsibility towards the environment and health of others.
- CCFO7:** Demonstrate an understanding of the world as a set of related systems by recognising that problem-solving contexts do not exist in isolation.
- CCFO8:** In order to contribute to the full personal development of each learner and the social and economic development of the society at large, it must be the underlying intention of any programme of learning to make an individual aware of the importance of:
 - reflecting on and exploring a variety of strategies to learn more effectively.
 - participating as responsible citizens in the life of local, national and global communities.
 - being culturally and aesthetically sensitive across a range of social contexts.
 - exploring education and career opportunities; and
 - developing entrepreneurial opportunities.

The application of CCFOs or global competencies is largely context and discipline dependent.

3. Assessment of WIL

Assessment of Work-Integrated Learning (WIL) should be based on the design of the learning component of the programme, expectations, and stated outcomes. In addition, the assessment of WIL is governed by the principles in The IIE Assessment Strategy and Policy (IIE009).

Attendance of the weekly collaborative sessions with the lecturer and with your group is required. For distance students, your participation will be done using Microsoft Teams or Zoom.

3.1 WIL Project

Your WIL project will consist of a collection of reports, evidence and materials that illustrate your skills and capabilities. The project includes reflecting on the learning process for one or both of the following purposes:

- To demonstrate student competence during a WIL process by putting together evidence of what they did, for example, documentation, background research, reflections, lessons learnt, etc. This would include all types of WIL e.g. Project, Simulation, Work Placement.
- To keep in one place, some of the documents students may wish to show a potential employer as evidence of their learning.

Your submissions can include Microsoft 365 Office documents such as, Project, PowerPoint, Excel and Word. The final submission of the portfolio will be after the 12th week in the semester – normally in week 13. Submission of the portfolio is done on Arc.

3.2 WIL Role Players

1. The **student** – the student is expected to attend all scheduled sessions (in person or in the case of distance students remotely), to meet deadlines, and collect and prepare evidence aligned to expectations as set out in the relevant WIL Module Manual.
2. The **WIL Coordinator** – takes responsibility for the overall operationalisation of WIL on a campus or for a group of students. The WIL Coordinator will also facilitate the initial engagement with the client.
3. IIE approved **lecturers** – designated to guide, mentor, assess and monitor students' academic progress in the WIL module.
4. The **client** is the customer who requires the software solution. The client will be responsible in evaluating the software solutions presented by each team.

A lecturer responsible for a WIL module may also be the designated WIL Coordinator.

3.3 Peer Evaluations

Students will be assessed on their ability to evaluate other students, or their peers (called a “peer evaluation”) in the group. Peer evaluations will be standardised across all the WIL modules and will be weighted differently across the various years in a three-year qualification.

The students are to complete the peer evaluation form (Annexure B).

3.4 Presentations

All WIL modules require students to deliver a presentation describing their project or activity to their peers and/or lecturer(s). This will typically happen at the end of the project, i.e. towards the end of the WIL module. Each student in the group is to be evaluated according to the presentation rubric (Annexure D).

The presentation for contact students can be done in front of the lecturer and peers, and for distance students the presentation will be done over Zoom or Microsoft Teams. There are two main components of presentations, namely, a verbal component and a visual component. The **verbal** component focuses on the oral, or spoken, portion of the presentation during which aspects such as tone, delivery, language, and audience engagement are assessed.

The **visual** component includes all other communication aids that are used during the presentation, e.g., slides, video clips, posters, handouts, models, simulations, diagrams, websites, etc. The visual images created by the students themselves may be included here if they are relevant to the environment that is being represented. A typical example would be when a group of students are discussing the presentation of a proposal to a prospective client. Visual aids used in presentations should be used effectively. For example, PowerPoint slides should **support** the presentation but not **become** the presentation. Consequently, students need to think about both what they say, how they say it, what they use to support what they say, and how they are acting professionally and appropriately in a work-like environment.

The **EXPO-style presentation** serves as a formal showcase of the final product in a simulated industry environment. Unlike traditional linear presentation, the EXPO requires the group to maintain a professional “exhibit” where they must demonstrate their software live, engage with stakeholders in real-time, and defend their technical decisions throughout the showcase and interactive Q&A. To effectively communicate the solutions values, teams are required to provide a comprehensive *display including a physical board display, a supporting PowerPoint presentation, and a live functional demo of the system*. Students are encouraged to be creative with their exhibit setup to create an immersive, professional experience that related a high standard of work-readiness.

4. Qualification Summary

Qualification Name: Bachelor of Computer and Information Science in Application Development (BCAD313 and BCAD323)

Qualification Code: BCAD313 and BCAD323

QUALIFICATION PURPOSE	EXIT LEVEL OUTCOMES
The purpose of this qualification is to qualify learners to follow a career in Software Application Development. The outcomes for this qualification were identified as critical to driving a successful career in software development, providing competent desktop and mobile application developers in the private and public sectors. By understanding business processes in the context of business rules, learners will be able to solve business problems and meet business needs through software application development. Learners will be suitably prepared to demonstrate competencies in application development and to contribute to the economic well-being of their organisation in a responsible manner. The qualification design supports the logical progression in learning throughout the programme by introducing learners to foundational and mathematical concepts, theories, and fundamental knowledge in the first year, positioning them to master more complex skills in analysing, interpreting, and developing desktop software, mobile applications, cloud computing, and dynamic web development in line with current IT trends and requirements. The design of the qualification will facilitate critical learning through exposure to and application of specialised learning areas, enabling learners to manage the versatile and	ELO1: Demonstrate the ability to apply key theories in the design and development of software applications. ELO2: Demonstrate the ability to provide software solutions ethically and professionally. ELO3: Demonstrate the ability to design software applications on a variety of platforms. ELO4: Communicate effectively and professionally as a member of a software design and development team. ELO5: Demonstrate the ability to conduct research related to IT programming and Cloud Computing.

dynamic context of application development. This qualification is designed to graduate learners with the ability to think and act strategically and professionally and to contribute meaningfully to the organisations that employ them.	
--	--

5. Module Summary

ITEM	DESCRIPTION
Faculty	Information Communications Technology
Qualification	Bachelor of Computer and Information Science in Application Development (BCAD313 and BCAD323)
Module Name	Information Systems 3E (Work Integrated Learning)
Module Code	INSY7315
Module Purpose	This module requires the students to integrate their knowledge and skills to develop software applications that meet specific given business requirements.
Module Outcomes	MO1: Identify software requirements for a new IT software system to meet given business requirements. MO2: Design the implementation plan to meet the pre-determined software requirements. MO3: Develop and implement the deliverables identified in the implementation plan. MO4: Create comprehensive documentation for each required deliverable for the development and implementation of the new IT software system. MO5: Collaborate as a group to produce all deliverables of the new IT software system.
Credits	15
Notional Hours	150 hrs (24 hrs contract)
Type of WIL	Project/Case Study/Simulation/Work Placement
Tools and Resources	Personal Computer Microsoft® Office 365 Internet Microsoft Teams Project Management Software GitHub Microsoft Visual Studio 2022, Android Studio etc.
Group/Individual Work	Group (3 – 5 members) involving individual components
Assessment Structure	Part 1 Weight = 25% Part 2 Weight = 50% Part 3 Weight = 25%

6. Pacer

It is important to communicate with your lecturer on the **progression** of your project during the collaboration sessions to ensure you are progressing in the right direction. Your lecturer can offer guidance and recommendations to improve on your project.

MILESTONE (ASSESSMENT POINT)	HAND IN WEEK	TASK
Professional Conduct in the Workplace Programme (Annexure E)	1	<u>INDIVIDUAL</u> Students must complete the Professional Conduct in the Workplace Programme (Annexure E) as part of the WIL module. No marks are allocated to this.
Weekly class to discuss hurdles, issues and recommendations	13	Two-hour collaborative sessions each week with the lecturer. Attendance is tracked by the lecturer for each of these sessions and should also be tracked by the team leader/secretary , whether the group met in class, or outside or class / online.
Task 1 (weight 25%)		
Documentation and Prototype	5	<u>GROUP</u> - Documentation - Prototype - Attendance
Task 2 (weight 50%)		
Code and Implementation	9	<u>GROUP</u> - Front End - Back End - Hosting - GitHub/Pipelines - Presentation - Attendance

Task 3 - Final Submission (weight 25%)		
• Final Report and EXPO	Exam Week 1	<u>GROUP</u> • Final project • Final documentation • User guide • Presentation EXPO (group and individually marked). • Attendance
• Overall Contribution and Attendance	Exam Week 1	<u>INDIVIDUAL</u> Overall contribution to entire project, documentation, GitHub, and collaborations with team, attendance in class and outside of class in group meetings.
• Peer-Evaluation	Exam Week 1	<u>INDIVIDUAL</u> Complete the peer-evaluation form.

7. WIL Mark Breakdown

MILESTONE (ASSESSMENT POINT)	SUBMISSION POINTS	WEIGHT	MARK BREAKDOWN
Task 1	1. Documentation	70%	280
	2. Prototype	25%	100
	3. Attendance	5%	20
Task 2	1. Coding, design, GitHub, implementation	70%	210
	2. Implementation presentation	20%	60
	3. Attendance	10%	30
Task 3	1. EXPO Presentation	30%	60
	2. Final Report (Updates)	30%	60
	3. Final Project		
	4. User Guide	15%	30
	5. Overall Contribution and Attendance	15%	30
	6. Peer-Evaluations (Annexure B)	10%	20

8. WIL Requirements

While there are general principles for the assessment of WIL modules, each WIL module will have its own marking criteria and weightings. See **Annexure C:** for ALL project rubrics.

8.1 Task 1

- Cover Page
- Table of Contents
- Introduction
- Requirements
- Non-functional requirements
- Analysis artifacts
- Implementation
- Data Schema
- Architecture artifacts
- Security
- DevOps
- Running Costs
- Change Management
- Appendices (if applicable)
- Prototype
- Rubric (Annexure C)

8.2 Task 2

- Front-end
- Back-end
- Hosting
- GitHub/Pipelines
- Presentation
- Rubric (Annexure C)

8.3 Task 3

- Task 1 and Task 2 are included in this submission. Combine all documentation into ONE document with updates from Task 1 and Task 2.
- This task includes marks for your overall contribution, attendance and peer evaluation, as well as EXPO presentation marks.
- **This is an individual hand in on ARC. ALL group members to hand in.**
- Rubric (Annexure C)

9. Detailed WIL Requirements

9.1 Task 1 Documentation 70%

9.1.1 Structure of the Document

The layout of the document with paragraphs, numbering, etc. must be exactly according to the specification below. Marks will be deducted for any deviations.

9.1.2 Cover Page

- Team Number (if applicable)
- Team Name
- Name and student number of each group member
- Name of client and logo

9.1.3 Table of Contents

Should contain numbering of each section and figures/tables if applicable.

9.1.4 Introduction

This paragraph is directed towards the management of the company for which the system is developed. Therefore, a summary justifying the system must be given. Give attention to the upcoming points in the document.

9.1.5 Requirements

Include all requirement artifacts in this section. Include any research that your team did to better understand the organisation, project and users of the software you will build.

9.1.6 User Roles

Describe the various user roles that your team has identified.

9.1.7 User Stories

These should be in the standard format: As a (user role who wants to accomplish something), I want to (what they want to accomplish), so that (why they want to accomplish that thing).

- **User Experience Journey Map**

A User Experience (UX) Journey Map shows all the screens in your software application and how a user can navigate between these screens. Consider doing this for each application that you plan to build and remember to include different user roles.

- **Work Breakdown Structure**

Draw up a table containing:

- The names of the tasks
- Description of each task
- Duration of each task
- Predecessor(s) if each task
- Team members responsible for each task
- Resources needed for each task

9.1.8 Non-functional Requirements

This section should cover non-functional requirements gathered through interaction with your client.

9.1.9 Analysis Artifacts

This section contains information about how your team analysed the requirements to create domain model.

- **Domain modelling**

Develop a **UML domain class diagram** that represents the main concepts of the system. The diagram should include the core domain classes, their attributes, and relationships. Briefly describe the purpose of each class.

- **Design artifacts**

Develop a **UML design class diagram** based on the system requirements. The diagram must illustrate the implementation classes, including their attributes, methods, access specifiers, keys, and relationships.

9.1.10 Implementation

This section should show your implementation documentation, such as **UML sequence diagrams** and **UML state diagrams** showing critical flows; **deployment plan documentation**; as well as any related documentation. Only important flows need to be documented.

9.1.11 Data Schema

Document the data storage explaining your **choices of technology** and develop an Entity Relationship Diagram (ERD). Include JSON schemas if using a document store technology (NoSQL). Describe and explain the diagrams and schema's that you include.

9.1.12 Architecture Artifacts

Describe which architecture patterns were used and why they were selected:

- **Design Patterns**

Document your use of best-practice design patterns and explain **why** they were selected. This section should demonstrate how the patterns are applied within the system at an object or interaction level. **Can use: UML Object Diagram** (showing instances involved in the design pattern).

- **Architecture Patterns**

Document your choice of architecture pattern and explain **why** it was selected for the system. This section should present the overall structure of the application and how its major components are organised. **Can use: System Architecture Diagram.**

- **Cloud**

Describe your cloud architecture and discuss the technology decisions made. Diagrams should include the cloud services used and clearly show network segregation as well as the protocols used to communicate between services. **You can use: Cloud Architecture Diagram.**

9.1.13 Security

In this section, provide a **detailed** discussion of how security was addressed within the application. Your discussion must cover standard security considerations, including network security, common vulnerabilities, and potential threats. Specific attention should be given to how the application prevents and mitigates cross-site scripting (XSS) attacks, along with any other relevant security risks. **(Hint: Apply the security principles and techniques covered in the PRSE module.)**

9.1.14 DevOps

Task 1 is intended as an initial project plan for this section and is subject to change during later stages of the project.

Rapid deployment of a high-quality application is pivotal to the success of a software product. This section should discuss how your team has addressed this non-functional requirement in your project, with particular focus on your use of **GitHub for version control, branching strategies and development flow**, and the **integration of automated testing** to ensure quality and reliability throughout the development lifecycle.

- **GitHub Actions Pipeline**

Describe, with the use of a diagram, the functionality of your GitHub Actions pipeline. The description should clearly illustrate the **branching model and workflow**, how **code changes move through the pipeline**, and where **automated testing** is executed as part of the continuous integration and deployment process.

9.1.15 Running Costs

Task 1 is intended as an initial project plan for this section and is subject to change during later stages of the project.

Show the predicted monthly costs of running the solution. Include **full running costs**, such as hosting, databases (e.g. SQL, Firebase), and any other infrastructure services required to operate the application. The solution **must be hosted**, but do not include costs related to team fees or development effort. **Show growth projections for two (2) years, based on input from the client.**

Students are **also** required to provide a table illustrating costs at different **scales**, for example: 100 users, 1,000 users, and 10,000 users, considering typical free-tier allowances (e.g. first 100 users free) and the incremental cost for additional users.

9.1.16 Change Management

Task 1 is intended as an initial project plan for this section and is subject to change during later stages of the project.

This section should describe your approach to managing the adoption of the software product your team has built. Consider addressing the following questions:

- **How and why will the organisation adopt your software?**
- **How and why will the users adopt your software?**
- **What is your strategy to gain adoption from both the organisation and the users?**

In addition, include a plan for handing over the system to the client, detailing the transition from development to production. Describe how users and the organisation will be moved from their old system to the new system, including training plans, timelines, and support strategies to ensure a smooth adoption process.

9.1.17 Appendices

- Declaration of Authenticity

9.2. Task 1 Prototype 25 %

Students are required to create a **working prototype** of their software solution. The prototype can be developed either in Figma or in their chosen IDE. No back-end functionality/coding is required; the focus is on design and interaction.

The prototype must demonstrate the following:

- **Design:** Show the visual layout and interface of the system, including navigation elements and key screens.
- **Flow of Information:** Illustrate how data moves through the system using dummy data where appropriate, so that functionality and user interactions can be clearly understood.
- **Responsive Design:** Include both mobile and desktop versions of the interface to demonstrate how the system adapts to different devices.

The goal of this prototype is to provide a clear, functional representation of the system for both stakeholders and developers, highlighting design decisions and user experience.

Attendance 5%

9.3. Task 1 Submission

GROUP SUBMISSION. ONE group member to submit on ARC for the group. Submission should include:

1. **Documentation in ONE document – PDF document on ARC.**
2. **Include either in the documentation document or in the comment section on ARC link to your prototype – this may be a Figma link or GitHub link if prototype was done in an IDE.**

9.4. Task 2 Code and Implementation 70%

9.4.1. Front End

Students are required to produce a fully designed front end for their software solution. This section should focus on the look, feel, usability, and overall user experience of the application.

Key areas to address include:

- Look and Feel: Overall aesthetic of the interface, visual hierarchy, and style consistency across all screens.
- Usability: Ease of use, clear navigation, intuitive interaction, and logical grouping of elements.
- Affordance: Design elements should indicate their function clearly, e.g. buttons look clickable, links are distinguishable.
- Branding: Incorporate logos, brand colours, fonts, and other visual identity elements consistently.
- Responsive Design: Ensure the interface adapts effectively to multiple screen sizes, including desktop, tablet, and mobile devices.
- Accessibility: Design for all users, including those with disabilities. Consider screen reader support, keyboard navigation, colour contrast, and scalable text.
- Colour and Typography: Use colours, fonts, and styles that enhance readability, accessibility, and visual appeal.
- Consistency: Maintain consistent layout, design patterns, and interactions across the application.
- Feedback and System Response: Visual or textual feedback for user actions, loading states, errors, and confirmations.
- Performance Considerations: Ensure design choices do not negatively affect load times or responsiveness.

9.4.2. Back End

Students are required to implement a fully functioning back end for their software solutions. All coding must be completed and fully operational.

Key areas to address include:

- Programming Skills: Demonstrate competence across different levels:
 - **Basic**: Control structures, data types, loops, functions, and simple logic.
 - **Intermediate**: Modular code, classes, error handling, and intermediate algorithms.
 - **Advanced**: Complex algorithms, design patterns, optimisation, and advanced features.
- Database Integration: Design and implement a database (e.g. SQL, Firebase) to store and manage application data. Include data modelling, relationships, and queries.
- APIs: Develop and integrate APIs to allow interaction between the front end and back end, and where appropriate, with external services. Include clear input/output handling and error management.
- Security Considerations: Implement security practices, such as input validation, authentication, and authorisation where applicable.
- Data Flow and Logic: Ensure proper handling of business logic, data processing, and correct information flow between the database, API, and front end

9.4.3. Hosting

Students are required to deploy their software solution, so it is fully accessible and operational. This includes:

- Hosting the website or application for user access.
- Hosting the database and ensuring it is properly connected to the application.
- Hosting any APIs required for front-end and back-end communication.
- Ensuring the solution is accessible, stable, and responsive in its hosted environment.

9.4.4. GitHub/Pipelines

Students are required to implement a GitHub workflow that supports the development and deployment of their solution. This should include:

- Branch Management: Organise code using branches for development, features, and main/release.
- Automated Testing: Include automated tests that run on code changes to ensure functionality.
- Automated Deployment: Configure pipelines to deploy the application automatically when changes are merged.

The focus is on practical implementation, demonstrating how CI/CD practices maintain code quality and streamline deployment.

9.5. Task 2 Implementation Presentation 20%

Students are required to present their software solution for Task 2 either in person or via video, as determined by the WIL coordinator. This presentation focuses primarily on Part 2 (Implementation), but students may also include relevant aspects from Part 1 to provide context.

The purpose of this presentation is to demonstrate the functionality, design, and implementation of the solution and **to obtain approval for implementation to the client**. Students should clearly explain:

- Key features and functionality of the system (front end, back end, hosting, APIs).
 - How the system meets the requirements and non-functional expectations.
 - Any technical decisions, design choices, or challenges overcome during implementation.
 - Integration of automated testing, deployment pipelines, and system reliability measures.
- Students are encouraged to use demonstrations, PowerPoint, screenshots, diagrams, or screen recordings to effectively communicate their implementation.

Attendance 10%

9.6. Task 2 Submission

GROUP SUBMISSION. ONE group member to submit on ARC for the group. Submission should include:

1. **ONLY** the group's GitHub link containing all source code within the GitHub link and README file – submit the link on ARC.
2. Any documentation relating to the presentation can be within the README file on GitHub (Example: PowerPoint, etc.)

9.7. Task 3 Final Project, Report and User Guide 45%

Students are required to submit the final version of their project and documentation, incorporating updates from Part 1 and Part 2. The submission should include:

- **Final Project:** The completed and fully operational software solutions, including all front-end, back-end, hosting, and CI/CD components.
- **Final Report:** Updated documentation reflecting all changes, improvements, and enhancements made since Task 1 and Task 2. This should clearly demonstrate how feedback and development progress have been applied.
- **User Guide:** Complete, detailed instructions for using the software, including navigation, functionality, and any setup required.

9.8. Task 3 EXPO 30%

Students are required to participate in an **EXPO-style presentation** to showcase their final project. This includes both group and individual components. The presentation should demonstrate professionalism, clarity, and effective communication.

Key elements to include:

- **Exhibit Setup:** Prepare a PowerPoint presentation, display board, and any props or demonstration materials needed to effectively present the project. Ensure the setup is organised, visually appealing, and supports the explanation of the project.
- **Group Presentation:** Collaborate as a team to present the project, demonstrating team dynamics, coordination, and role distribution. Highlight key aspects of the system, implementation decisions, and project outcomes.
- **Individual Presentation:** Each student should demonstrate their own understanding and contribution by speaking confidently about their work.
- **Professional Skills:** Attention will be given to speaking clarity, body language, tone of voice, dress and professional appearance, as well as the ability to respond to questions effectively.
- **Engagement:** Ensure the audience can easily follow the presentation, understand the solution, and see how the team worked together to achieve the project goals.

The EXPO presentation provides an opportunity to demonstrate mastery of the project, communicate technical knowledge clearly, and showcase professionalism in a formal presentation environment.

9.9. Task 3 Overall Contribution 5%

This evaluates each student's individual contribution to the project, including development, documentation, teamwork, and participation in presentations.

9.10. Task 3 Peer Evaluation 10%

Students will complete a peer evaluation to assess the contribution, collaboration, and teamwork of each group member.

Attendance 10%

9.11. Task 3 Submission

INDIVIDUAL SUBMISSION. Submission should include:

1. Cover page.
2. Table of contents.
3. Group name and a list of team members names, surnames and student numbers.
4. Any links to be included in the document here such as **GitHub / Figma etc. All program source code to be on GitHub.**
5. Improvements should have been made to the previous parts' documentation based on lecturer feedback for this final submission.
6. User Guide document.
7. Annexures:
 - Declaration of Authenticity (Annexure A).
 - Peer Evaluations (Annexure B) for each team member. Penalties may be applied if the peer-evaluations highlight an issue with a team member.
 - PowerPoint presentation for EXPO.
 - Any other necessary documentation.

ANNEXURE A – Declaration of Authenticity

Plagiarism occurs in a variety of forms. Ultimately, though, it refers to the use of the words, ideas, or images of another person without acknowledging the source using the required conventions. The IIE publishes a Quick Reference Guide (available on The IIE Library website) that provides more detailed guidance, but a brief description of plagiarism and referencing is included below for your reference. It is vital that you are familiar with this information and the Intellectual Integrity Policy before attempting any assignments.

The IIE respects the intellectual property of other people and requires its students to be familiar with the necessary referencing conventions. Please ensure that you seek assistance in this regard before submitting work if you are uncertain.

If you fail to acknowledge the work or ideas of others or do so inadequately this will be handled in terms of the Intellectual Integrity Policy (IIE023 – [available in the library]) and/or the Student Code of Conduct policy (IIE026)– depending on whether or not plagiarism and/or cheating (passing off the work of other people as your own by copying the work of other students or copying off the Internet or from another source) is suspected.

Your campus offers individual and group training on referencing conventions – please speak to your librarian or ADC/Campus co-ordinator in this regard.

Reiteration of the Declaration you have signed:

1. I have been informed about the seriousness of acts of plagiarism.
2. I understand what plagiarism is.
3. I am aware that The Independent Institute of Education (IIE) has a policy regarding plagiarism and that it does not accept acts of plagiarism.
4. I am aware that the Intellectual Integrity Policy and the Student Code of Conduct prescribe the consequences of plagiarism.
5. I am aware that referencing guides are available in my student handbook or equivalent and in the library and that following them is a requirement for successful completion of my programme.
6. I am aware that should I require support or assistance in using referencing guides to avoid plagiarism, I may speak to the lecturers, the librarian, or the campus ADC/ Campus Co-ordinator for clarification.
7. I am aware of the consequences of plagiarism.

Please ask for assistance prior to submitting work if you are at all unsure.

***Attach the declaration to your report*

Declaration of authenticity

I, _____ ID Number, _____ hereby declare that this portfolio, and any evidence included therein, contains my own independent work and that I have not received help from other groups.

I confirm that we have not committed plagiarism in the accomplishment of this work, nor have I falsified and/or invented experimental data.

I accept the academic penalties that may be imposed for violations of the above.

STUDENT SIGNATURE: _____ DATE: _____

ANNEXURE B - Peer Evaluation

(NOT TO BE SHARED WITH TEAM MEMBERS)

***Please complete and include the peer-evaluation reports when submitting your final PoE.*

GROUP NAME/NUMBER: **DATE:**

Please rate each of your team members using the details in the assessment criteria descriptions provided. Marks received from each member of the team will be added up and then averaged for each member's individual mark. Complete a separate evaluation form for each team member.

Name of student being evaluated:		Never	Seldom	Frequently	Always
		0	1	2	3
The student's personal work					
1.	The student contributed good ideas that added value to the project.				
2.	The student performed their tasks in line with what was expected of them.				
3.	The student produced high quality work.				
4.	The student managed their own time well and met deadlines.				
5.	The student connected their own learning and skills to a real-world problem.				
The student's work as part of a team (when relevant)					
6.	The student accepted responsibility for a fair portion of the tasks.				
7.	The student was an enthusiastic member of my team.				
8.	The student helped others to be successful.				
9.	The student worked well with other members of the team.				
10.	The student showcased respect and dignity towards all members of the team.

ANNEXURE C - Project Rubric

Markers – Please note that the rubrics below must be used to evaluate the students' responses to the relevant assignment questions. Please clearly indicate the specific mark you allocate for each rubric criterion to show how you reached the question total. Also, please provide constructive feedback to ensure students and moderators can follow your marking logic based on the rubric criteria. The most important point is that many markers across different campuses will be marking. The rubric needs to promote the validity and reliability of their marking practices. In addition, there is a separate memorandum that provides additional marking guidance – please ensure you get this from your relevant campus administrator.

While reading the students' submission the marker should consider the goals of the task and the description of each qualitative level. The marker should match the students' work to the appropriate qualitative level, highlighting areas of achievement or areas that were not adequately addressed. Once the marker has considered all of this then only should the student be assigned a mark.

Assessment Sheet (Marking Rubric) Task 1 - Documentation

MODULE NAME:	MODULE CODE:
Information Systems 3E – WIL – Work Integrated Learning	INSY7315

TASK 1					
Marking Criteria	Does not meet the required standard	Meets the required standard	Partially exceeds the standard	Greatly exceeds the required standard	Feedback
Structure of Document [10 Marks]	Document layout is incorrect; numbering, table of contents, headings are missing.	Layout mostly correct; minor deviations from the layout and order of the documentation.	Well-structured; numbering and headings are mostly correct.	Perfect layout, numbering, and headings fully follow the specification of the documentation.	
	0 – 4 Marks	5 Marks	6 – 7 Marks	8 - 10 Marks	
Introduction [10 Marks]	Missing key details (about the team, client, purpose, etc.)	Basic introduction: some details included.	Clear introduction with most key details.	Excellent, clear, and professional introduction including all required details.	
	0 – 4 Marks	5 Marks	6 - 7 Marks	8 – 10 Marks	
Requirements: User Roles & Stories [10 Marks]	User roles or stories missing or incorrect.	Roles and stories mostly correct.	Clear and relevant roles and stories.	Complete, well-structured, standard-format user roles and user stories.	
	0 – 4 Marks	5 Marks	6 - 7 Marks	8 - 10 Marks	

Requirements: UX Journey Map [10 Marks]	Map missing or unclear, navigation not shown.	Basic map showing some screens.	Clear map showing most screens and flows.	Comprehensive map showing all screens, flows, and roles.	
	0 – 4 Marks	5 Marks	6 - 7 Marks	8 - 10 Marks	
Requirements: Work Breakdown Structure [15 Marks]	Work Breakdown Structure incomplete; missing tasks or responsibilities.	Work Breakdown Structure mostly complete; some details missing.	Clear Work Breakdown Structure with tasks, durations and team assignments.	Excellent Work Breakdown Structure with all details, predecessors, and resources.	
	0 – 6 Marks	7 Marks	8 - 11 Marks	12 - 15 Marks	
Requirements: Non-Functional Requirements [15 Marks]	Missing or incorrect non-functional requirements.	Some relevant non-functional requirements included.	Most key non-functional requirements included and explained.	Comprehensive non-functional requirements with clear justification.	
	0 – 6 Marks	7 Marks	8 - 11 Marks	12 - 15 Marks	
Analysis Artifacts: Domain Class Diagram [15 Marks]	Diagram missing or incorrect; classes/relationships unclear.	Basic domain modal model diagram showing main classes.	Clear domain model class diagram with most classes, attributes and relationships.	Complete, professional diagram with explanations for all classes, including name, attributes and relationships.	
	0 – 6 Marks	7 Marks	8 - 11 Marks	12 - 15 Marks	

Analysis Artifacts: Design Class Diagram [20 Marks]	Missing or incomplete diagram; methods and attributes are not clear.	Basic design class diagram with some attributes and methods.	Mostly complete design class diagram with methods, attributes and relationships.	Fully detailed design class diagram with correct UML notation, name, attributes, methods, relationships, and keys.	
	0 – 8 Marks	9 Marks	10 - 14 Marks	15 - 20 Marks	
Implementation: Sequence & State Diagrams [20 Marks]	Diagrams missing or unclear; flows not understandable.	Some flows represented; minor errors, improvements can be made.	Most critical flows represented and understandable.	All critical flows clearly documented with accurate diagrams.	
	0 – 8 Marks	9 Marks	10 - 14 Marks	15 - 20 Marks	
Implementation: Deployment Plan [10 Marks]	Plan is missing or poorly explained. No infrastructure mentioned.	Basic deployment plan included with basic list of steps and components.	Clear deployment plan; includes environment setup and basic rollout strategy.	Comprehensive deployment plan with diagrams and rationale.	
	0 – 4 Marks	5 Marks	6 - 7 Marks	8 - 10 Marks	
Data Schema: Choice of Technology [10 Marks]	Technology choice is missing or unjustified.	Basic explanation of choice.	Good justification for technology and explains how chosen technology will support the project requirements.	Excellent justification with alternatives considered and considers future scalability.	
	0 – 4 Marks	5 Marks	6 - 7 Marks	8 - 10 Marks	

Data Schema: ERD [20 Marks]	ERD missing, unreadable or containing significant errors.	Basic ERD with most main entities and relationships; most primary keys are identified.	Clear ERD with correct entities, relationships, keys and attributes.	Comprehensive professional ERD includes explanations for all relationships.	
	0 – 8 Marks	9 Marks	10 - 14 Marks	15 - 20 Marks	
Architecture: Design Patterns [10 Marks]	Missing or incorrectly identified patterns that are not present in design.	Basic explanation and application. Showing simple application.	Correct application with explanation - demonstrates how the pattern solves a specific code interaction.	Excellent, professional explanation and integration. Clear UML diagrams showing how patterns work.	
	0 – 4 Marks	5 Marks	6 - 7 Marks	8 - 10 Marks	
Architecture: Architecture Patterns [10 Marks]	Missing or fails to describe the overall structure of the software.	Basic description of a pattern including a simple diagram.	Correct choice and explanation with diagrams – showing how major system components are organized.	Excellent explanation, justified choice, clear diagrams showing logical interaction.	
	0 – 4 Marks	5 Marks	6 - 7 Marks	8 - 10 Marks	
Architecture: Cloud Architecture [10 Marks]	Missing or unclear. Lack of understanding of cloud services and connectivity.	Basic diagram showing major cloud services used and simple connectivity shown.	Clear diagrams with major components, network segregation, and communication protocols.	Professional diagrams with full detail on service selection, security and network flow with justification.	
	0 – 4 Marks	5 Marks	6 - 7 Marks	8 - 10 Marks	

Security [25 Marks]	Security not addressed, missing key areas, vulnerable to threats.	Some security aspects explained; mentions standard protections for networks and common vulnerabilities.	Most security aspects covered with clear explanations including risk mitigation and security principles.	Comprehensive security analysis, risk analysis, risks identified and mitigation strategy for each.	
	0 – 8 Marks	9 - 14 Marks	15 - 19 Marks	20 - 25 Marks	
DevOps [20 Marks]	Missing or lacks understanding of version control and automation.	Basic description of GitHub use; identifies simple branching strategy.	Clear explanation of workflow, branching, testing.	Professional workflow diagrams and detailed CI/CD explanations.	
	0 – 8 Marks	9 Marks	10 – 14 Marks	15 – 20 Marks	
Running Costs [20 Marks]	Missing or contains unrealistic cost estimations for the proposed solution.	Basic cost table; identifies hosting and database fees for the current month.	Clear table with costs for multiple user scales (100, 1000, etc.) and consider different tiers.	Comprehensive two-year cost analysis with projections and detailed scaling analysis with growth assumptions.	
	0 – 8 Marks	9 Marks	10 – 14 Marks	15 – 20 Marks	
Change Management [20 Marks]	Missing or ignoring the human/organizational element of system adoption.	Basic plan included - mentions that users will need training on new software.	Clear plan with adoptions strategy for both the organization and users; identifies a basic handover timeline.	Comprehensive strategy, including detailed training plans, handover, transition support and a clear roadmap for system adoption.	
	0 – 8 Marks	9 Marks	10 – 14 Marks	15 – 20 Marks	
					TOTAL: 280

Assessment Sheet (Marking Rubric) Task 1 - Prototype

MODULE NAME:	MODULE CODE:
Information Systems 3E – WIL – Work Integrated Learning	INSY7315

TASK 1					
Marking Criteria	Does not meet the required standard	Meets the required standard	Partially exceeds the standard	Greatly exceeds the required standard	Feedback
Visual Design & Interface Layout Layout, Spacing, Alignment, Readability	Poor spacing; cluttered interface; content is difficult to read.	Basic readable layout: spacing is functional but inconsistent; hierarchy is present, but some screens feel unpolished or crowded.	Clear structure with strong visual hierarchy; good use of white space and alignment; text is easily legible across most screens.	Professional visual hierarchy; polished and balanced; good spacing, alignment and readability.	
[10 Marks]	0 – 4 Marks	5 Marks	6 – 7 Marks	8 – 10 Marks	
Visual Design & Interface Layout Consistency and Styling	Inconsistent colours, fonts and styles; branding is missing or different across screens.	Mostly consistent styling: brand colours are used although some UL elements vary in style.	Good consistency across screens; styling follows a logical theme; branding identity is clearly integrated.	Fully consistent fonts, colours, styling and strong branding identity.	
[10 Marks]	0 – 4 Marks	5 Marks	6 – 7 Marks	8 – 10 Marks	

Visual Design & Interface Layout	Navigation is missing, broken, or confusing; user is likely to get lost and menus are illogical.	Basic navigation structure is functional; menus and buttons are placed in standard locations but lack intuitive flow.	Clear and logical navigation; menu items are well-categorised; user can move between sections with minimal effort.	Highly intuitive and user-friendly navigation; innovative yet familiar placement of menus/buttons that anticipates user needs.	
Navigation Design					
[10 Marks]	0 – 4 Marks	5 Marks	6 – 7 Marks	8 – 10 Marks	
Visual Design & Interface Layout	Many key screens missing or blank.	Most key screens included, the prototype covers the basic requirements but still may miss screens.	All major screens included and the prototype provides a solid representation of the full user experience from start to finish.	Comprehensive system representation; every detail included for every screen.	
Completeness of Screens					
[10 Marks]	0 – 4 Marks	5 Marks	6 – 7 Marks	8 – 10 Marks	
Flow of Information & Interaction	User path is unclear and confusing; steps required to complete a task are illogical.	Follows basic logical sequence; core tasks can be completed though may feel clunky or over-complicated.	Clear and structured flow; transition between screens makes sense and follow standard UX patterns.	Seamless and well-thought-out journeys; every interaction feels natural and optimised for the quickest path to task completion.	
Logical User Flows					
[10 Marks]	0 – 4 Marks	5 Marks	6 – 7 Marks	8 – 10 Marks	

Flow of Information & Interaction Screen Connectivity [10 Marks]	Very static. Screens not linked or broken, prototype not interactive.	Basic interactivity is functional; core buttons link to correct screens though some links may be missing or dead-ended.	Most interactions are functional; the prototype feels like a real application; transition and overlays are used effectively.	Fully interactive and logically connected; sophisticated use of tools to simulate a live application.	
	0 – 4 Marks	5 Marks	6 – 7 Marks	8 – 10 Marks	
Flow of Information & Interaction Demonstration of Functionality [15 Marks]	Functionality unclear; no meaningful data; roles not considered.	Basic functionality shown; limited dummy data; minimal role differentiation.	Clear demonstration of system functionality; relevant dummy data; role-based flows evident.	Comprehensive and realistic demonstration; meaningful dummy data; well-developed flows for all roles; functionality clearly understandable.	
	0 – 6 Marks	7 Marks	8 – 11 Marks	12 – 15 Marks	
Responsive Design [15 Marks]	Only one version provided (web or mobile); layout breaks across devices.	Both versions included – basic responsiveness shown.	Good adaptation of layout between web and mobile; usability maintained.	Excellent responsive design: layout thoughtfully adapted; clear understanding of device differences.	
	0 – 6 Marks	7 Marks	8 – 11 Marks	12 – 15 Marks	
Usability & UX [10 Marks]	Interface confusing; poor usability; no consideration of user experience.	Basic usability; system mostly understandable.	Good usability; clear affordances; logical layout; some creativity.	Excellent usability; intuitive design; strong affordance; thoughtful UX decisions; creative and user-centred design.	
	0 – 4 Marks	5 Marks	6 – 7 Marks	8 – 10 Marks	
					TOTAL: 100

Assessment Sheet (Marking Rubric) Task 1 – Attendance

Attendance (Individual) [20 Marks]	Frequently absent; poor participation, little contribution.	Mostly present; participates only when prompted.	Consistently present; actively participates in group.	Fully engaged; consistently contributes and committed.	
	0 – 8 Marks	9 Marks	10 – 14 Marks	15 – 20 Marks	
					TOTAL: 20

Assessment Sheet (Marking Rubric) Task 2 – Code and Implementation

MODULE NAME:	MODULE CODE:
Information Systems 3E – WIL – Work Integrated Learning	INSY7315

TASK 2					
Marking Criteria	Does not meet the required standard	Meets the required standard	Partially exceeds the required standard	Greatly exceeds the required standard	Feedback
Front End: Visual Design & Branding [10 Marks]	Interface is unpolished; inconsistent use of colours and fonts; branding is missing or poorly applied.	Basic layout with some branding; colours and typography are functional but lack professional hierarchy.	Well-designed interface with consistent branding; clear visual hierarchy.	Exceptional aesthetic appeal; professional-grade branding; perfect consistency in style and visual identity across all screens.	
	0 – 4 Marks	5 Marks	6 – 7 Marks	8 – 10 Marks	
Front End: UX & Feedback [10 Marks]	Navigation is confusing; lack of system feedback; interactive elements lack clear affordance.	Standard navigation and usability; some system feedback provided for user actions; buttons and links and functional.	Intuitive navigation and clear affordance; consistent system response to user actions; logical grouping of elements.	Flawless user journey; sophisticated feedback systems; highly intuitive and user-centric flow.	
	0 – 4 Marks	5 Marks	6 – 7 Marks	8 – 10 Marks	

Front End: Responsiveness & Accessibility [15 Marks]	Layout brakes on different screen sizes; no consideration for accessibility.	Layout is mostly responsive on mobile and desktop; basic accessibility standards met.	Seamless adaptation across mobile, tablet, and desktop; good colour contrast and support met.	Perfect responsive behavior: advanced accessibility features implemented.	
	0 – 6 Marks	7 Marks	8 – 11 Marks	12 – 15 Marks	
Back End: Programming Skills [25 Marks]	Code is unorganized or repetitive; no use of modularity; difficult to read or maintain.	Basic logic with functional control structures; code is somewhat modular using simple functions/classes.	Intermediate implementation; clean, modular code with effective error handling and modular classes.	Advanced implementation; uses design patterns and optimized algorithms; code is professional, scalable, and highly readable.	
	0 – 8 Marks	9 – 14 Marks	15 – 19 Marks	20 – 25 Marks	
Back End: Database [20 Marks]	Database is poorly structured; relationships are missing; data integrity issues are present.	Functional database design: tables/collections are connected; basic queries are operational.	Clear data modelling; correct use of relationships and keys; efficient query structure.	Professional ERD implementation; optimized data storage; advanced data integrity constraints and efficient indexing.	
	0 – 8 Marks	9 Marks	10 – 14 Marks	15 – 20 Marks	

Back End: APIs [20 Marks]	APIs are broken or missing; incorrect use of HTTP methods; data does not flow to front end.	Functional API endpoints; handles basic input and output; successful communication with the front end.	Well-structured API endpoints; clear input/output handling; appropriate use of HTTP status codes.	Robust API architecture; excellent error management; integrates external services if required; highly efficient data exchange.	
	0 – 8 Marks	9 Marks	10 – 14 Marks	15 – 20 Marks	
Back End: Security [20 Marks]	Security is ignored; vulnerable to common attacks; sensitive data is exposed.	Basic security implemented; simple input validation and password handling present.	Strong security practices; effective input validation, authentication, and authorization measures.	Comprehensive security; advanced mitigation for potential threats; follows security principles and fully secure data flow.	
	0 – 8 Marks	9 Marks	10 – 14 Marks	15 – 20 Marks	
Back End: Data Flow & Logic [20 Marks]	Business logic is flawed; data is lost or corrupted during processing; information flow is disjointed.	Core business logic is functional; data moves correctly between the database, API and UI.	Well-handled business logic, efficient data processing; clear and logical information flow across all layers.	Sophisticated handling of complex business rules; data flow is optimized for performance; perfect logic synchronization.	
	0 – 8 Marks	9 Marks	10 – 14 Marks	15 – 20 Marks	

Hosting: Deployment & Connectivity [20 Marks]	Solution is not live; application cannot connect to the database or APIs in the cloud.	Solution is hosted and live, basic connection between front end, back end and database.	Stable hosted environment: all services are integrated and communicate correctly via live URLs.	Highly reliable deployment; high uptime; clear separation of services with optimized cloud configuration.	
	0 – 8 Marks	9 Marks	10 – 14 Marks	15 – 20 Marks	
Hosting: Stability & Rationale [15 Marks]	Hosted solution is unstable; frequent crashes or slow response times; poor choice of hosting platform.	Hosted environment is generally stable; meets basic performance expectations.	Good system stability and response times; environment is configured for consistent user access.	Professional-grade stability; optimized performance; includes rationale for technology decisions and cloud architecture.	
	0 – 6 Marks	7 Marks	8 – 11 Marks	12 – 15 Marks	
GitHub: Branching & Workflow [15 Marks]	No version control used or single branch (main) used for all changes, no commit history logic.	Basic use of GitHub; evidence of some branching for different features.	Organized branching strategy (feature, develop, main); clear and descriptive commit history.	Professional Gitflow implementation; rigorous branching and merge discipline throughout development.	
	0 – 6 Marks	7 Marks	8 – 11 Marks	12 – 15 Marks	

GitHub: CI/CD & Pipelines [20 Marks]	No automation; manual deployment only; no testing included in the workflow.	Basic GitHub actions or pipeline configured, evidence of automated deployment or simple tests.	Clear CI/CD pipeline; automated tests run on code changes; successful automated deployment to hosting.	Advanced pipeline configuration; comprehensive automated test suite (unit/integration); seamless, hands-off deployment flow.	
	0 – 8 Marks	9 Marks	10 – 14 Marks	15 – 20 Marks	
TOTAL: 210					

Assessment Sheet (Marking Rubric) Task 2 – Presentation

MODULE NAME:	MODULE CODE:
Information Systems 3E – WIL – Work Integrated Learning	INSY7315

TASK 2					
Marking Criteria	Does not meet the required standard	Meets the required standard	Partially exceeds the required standard	Greatly exceeds the required standard	Feedback
Technical Demo & Implementation [20 Marks]	Demo is missing or fails significantly; core features do not work; hosting is not demonstrated.	Basic demo showing functional front-end and back-end; system is live; most key features visible.	Smooth demonstration of all key features; clear evidence of full integration between UI, logic and hosting.	Flawless professional demo; high system reliability; clearly showcases a client-ready hosted solution.	
	0 – 8 Marks	9 Marks	10 – 14 Marks	15 – 20 Marks	
Architecture & System Design [15 Marks]	Technical decisions are not explained; security and database structures are ignored or unclear.	Basic explanation of the API and database structure; some mention of security and DevOps.	Clear justification of architecture and design; detailed explanation of data flow and security measures.	Expert-level technical defense; deep insight into API design, security mitigation and robust DevOps strategy.	
	0 – 6 Marks	7 Marks	8 – 11 Marks	12 – 15 Marks	

GitHub & Version Control [10 Marks]	No mention of GitHub or version control; no evidence of branching or automated pipelines.	Mentions use of GitHub; shows basic branching or a simple deployment pipeline.	Clear walkthrough of the branching strategy and the functionality of the CI/CD pipeline.	Comprehensive explanation of the development of lifecycle; demonstrates automated testing and deployment success.	
	0 – 4 Marks	5 Marks	6 – 7 Marks	8 – 10 Marks	
Requirements Alignment [5 Marks]	Does not link the implementation back to the original requirements or user stories.	Mentions requirements briefly; shows how basic functional needs are met.	Good alignment between the built features and the clients' functional/non-functional expectations.	Exceptional mapping of implementation to requirements clearly justifies how the solution solves the client's problem.	
	0 – 1 Marks	2 Marks	3 – 4 Marks	5 Marks	
Presentation: Communication & Professionalism [10 Marks]	Poor delivery; lack of visual aids; difficult to follow; unprofessional tone or appearance.	Basic presentation skills: visual aids are present but may be cluttered or simple.	Confident delivery; clear and professional communication; visual aids effectively support the technical content.	Professional presentation; excellent pacing and engagement; visuals are polished and enhance the technical narrative.	
	0 – 4 Marks	5 Marks	6 – 7 Marks	8 – 10 Marks	
TOTAL: 60					

Assessment Sheet (Marking Rubric) Task 2 – Attendance

Attendance (Individual) [30 Marks]	Frequently absent; poor participation, little contribution development process.	Mostly present; participates only when prompted, basic progress shown.	Consistently present; actively participates in group work and discussions.	Fully engaged; consistently contributed to development and highly committed.	
	0 – 14 Marks	15 Marks	16 – 22 Marks	23 – 30 Marks	
					TOTAL: 30

Assessment Sheet (Marking Rubric) Task 3 Final Report & Final Project (Updates)

MODULE NAME:	MODULE CODE:
Information Systems 3E – WIL – Work Integrated Learning	INSY7315

TASK 3					
Marking Criteria	Does not meet the required standard	Meets the required standard	Partially exceeds the standard	Greatly exceeds the required standard	Feedback
Final Report Updates & Refinement [25 Marks]	Feedback from Task 1 & 2 ignored; documentation is disjointed; no updates made.	Most feedback addressed; documentation combined into one document; basic updates made.	Clear evidence of refinement; feedback is mostly integrated.	Professional seamless final report: document perfectly matches the final system. All updates made.	
	0 – 8 Marks	9 – 14 Marks	15 – 19 Marks	20 – 25 Marks	
Project Completion & Polishing [25 Marks]	System is incomplete or contains major bugs; core features discussed in previous tasks are missing or broken.	Project is mostly operational; all core features functional; basic UI/UX applied since previous Tasks.	High level of completion; bug-free experience; visible improvements in performance or design based on feedback.	Flawless production-ready solution; exceptional attention to detail; high system stability and speed. System is complete.	
	0 – 8 Marks	9 – 14 Marks	15 – 19 Marks	20 – 25 Marks	

Deployment & CI/CD Final Status [10 Marks]	Hosting is unstable or disconnected; CI/CD pipeline is broken or inactive.	System is live and accessible; basic pipeline is functional.	Stable, optimized hosting; pipeline successfully handles the final deployment with automated checks.	Professional cloud environment; highly efficient CI/CD workflow; perfectly document deployment lifecycle.	
	0 – 4 Marks	5 Marks	6 – 7 Marks	8 – 10 Marks	
TOTAL: 60					

Assessment Sheet (Marking Rubric) Task 3 – User Guide

MODULE NAME:	MODULE CODE:
Information Systems 3E – WIL – Work Integrated Learning	INSY7315

TASK 3					
Marking Criteria	Does not meet the required standard	Meets the required standard	Partially exceeds the required standard	Greatly exceeds the required standard	Feedback
Instructions & Functionality [15 Marks]	Instructions are missing, vague or incorrect; does not cover all key system features.	Covers all major functions; instructions are followable but may lack detail for complex tasks.	Clear, detailed step-by-step guidance; includes instructions for different user roles.	Comprehensive and highly accessible instructions; covers every feature and case; logical and easy to follow.	
	0 – 6 Marks	7 Marks	8 – 11 Marks	12 – 15 Marks	
Navigation & Visual Aids [10 Marks]	No visual aids; text-heavy and difficult to navigate; poor document structure.	Includes some screenshots to support text, layout if functional.	Good use of annotated screenshots; layout is organised with clear headings and a table of contents.	Professional layout; high-quality annotated screenshots for every major step; visually intuitive and easy to skim/read.	
	0 – 4 Marks	5 Marks	6 – 7 Marks	8 – 10 Marks	

Setup & Technical Requirements [5 Marks]	No set-up instructions or technical requirements provided.	Basic setup/login instructions provided; mentions minimum browser/system requirements.	Clear setup guide; includes basic troubleshooting tips for common user errors.	Detailed technical prerequisite sections; foolproof setup instructions and a comprehensive FAQ/troubleshooting guide.	
	0 – 1 Marks	2 Marks	3 – 4 Marks	5 Marks	
TOTAL: 30					

Assessment Sheet (Marking Rubric) Task 3 – EXPO Presentation

MODULE NAME:	MODULE CODE:
Information Systems 3E – WIL – Work Integrated Learning	INSY7315

TASK 3					
Marking Criteria	Does not meet the required standard	Meets the required standard	Partially exceeds the required standard	Greatly exceeds the required standard	Feedback
Exhibit Setup & Visual Appeal [15 Marks]	Setup is disorganised or incomplete; visual aids are cluttered, low-quality, or fail to support the project explanation.	Basic organised setup: PowerPoint and display materials are functional and relevant to the project.	Visually appealing and well-structured exhibit; clear use of diagrams/props that effectively guide the audience.	Professional grade exhibit; highly engaging and creative setup; visual aids are of industry-standard quality and perfectly support the pitch.	
	0 – 6 Marks	7 Marks	8 – 11 Marks	12 – 15 Marks	
Group Dynamics & Coordination [15 Marks]	Team appears fragmented; lack of coordination; transitions between speakers are awkward or non-existent.	Team demonstrates basic coordination; roles are clearly assigned and transitions between speakers are functional.	Strong team synergy: members support each other's points; clear evidence of a collaborative development process.	Exceptional group cohesion; seamless transitions; team functions as a professional unit with perfectly balanced contributions.	
	0 – 6 Marks	7 Marks	8 – 11 Marks	12 – 15 Marks	

Group Q&A Response [10 Marks]	Team is unable to answer basic questions; presentation is difficult to follow and confusing.	Team answers questions accurately; presentation follows a logical flow that is understandable.	Team engages well with audience; provides clear, insightful answers to technical and business-related questions.	Mastery of the project; team anticipates audience questions; provides sophisticated, well-defended technical responses.	
	0 – 4 Marks	5 Marks	6 – 7 Marks	8 – 10 Marks	
Use Annexure E for individual presentation marks (20 marks) = total 60 marks for EXPO presentation.					TOTAL: 40

Assessment Sheet (Marking Rubric) Task 3 – Overall Contribution & Attendance

TASK 3					
EXPO Attendance & Presence (Individual) [20 Marks]	If student is absent from EXPO – 0 will be awarded. The student arrived late/left early without authorization, causing disruption to the exhibit.	Present for the EXPO but showed inconsistent presence at the booth during the day.	Consistently present at the exhibit for full duration, punctual arrival.	Fully committed; punctual arrival and remained highly active at the exhibit.	
	0 – 8 Marks	9 Marks	10 – 14 Marks	15 – 20 Marks	
Overall Contribution (Individual) [10 Marks]	Minimal contribution to the final build or documentation; failed to pull weight in team or tasks or presentation, no contribution on GitHub.	Contributed basic elements to the code / report; followed instructions and supported team when asked. Minimal contribution on GitHub.	Strong individual contribution; actively handled assigned development and documentation tasks; reliable and contributed on GitHub.	Exceptional individual contribution; took initiative in development and documentation; a driving force behind the projects success and great GitHub contribution.	
	0 – 4 Marks	5 Marks	6 - 7 Marks	8 - 10 Marks	
					TOTAL: 30

ANNEXURE D – Individual Presentation Rubric

This is the rubric your lecturer will mark your group/individual presentation against. Please refer to this when preparing your presentation.

NAME AND STUDENT NUMBER..... **MODULE NAME AND CODE:**

CRITERIA	0-1 Does not meet the required standards	2 – Meets the required standards	3 – Partially exceeds the required standards	4 – Exceeds the required standards	TOTAL
NON-VERBAL SKILLS (CCFO5)					
Audience Engagement	- Makes no attempt to interact with the audience. - Unprepared - does not cope with interruptions during presentation.	- Sometimes interacts with the audience. - Tense, anxious, appears defensive, distracting, unnatural and unnecessary movement. - Does not recover well when making mistakes.	- Has frequent interaction with the audience. - Recovers quickly and smoothly when mistakes are made.	Holds attention through direct interaction with the audience.	/4
VERBAL SKILLS (CCFO5)					
GROUP DYNAMIC (CCFO2; CCFO3)					
Individual interaction with: Team members and Audience	- Does not participate in the presentation. - Does not respond to feedback (verbal and nonverbal) from audience.	- Little participation in the presentation. - Occasionally responds to feedback (verbal and nonverbal) from audience.	- Participates in presentation, shares responsibilities with peers. - Frequently responds to feedback (verbal and nonverbal) from audience.	- Participates enthusiastically in presentation, supports peers, takes lead when appropriate. - Smoothly integrates appropriate feedback (verbal and nonverbal) from audience into presentation.	/4

Language and Delivery	• Too loud/too soft, abrupt, condescending. • Inappropriate, in poor taste, mumbles, incorrect use of terminology. • Shows no interest in topic or activity/does not participate in oral part of presentation.	• Cannot be heard by audience. • Unable to articulate ideas. • Mumbles, appears distracted or unfocused, reads notes word for word.	• Varies volume and pitch. • Correct use and pronunciation of terms. • Thoughts well-articulated, uses own word	• Clear, easy to listen to and articulate. • Correct and effective use of language. • Enthusiastic, relaxed, self-confident, seldom refers to notes, maintains interest of audience throughout presentation.	/4
-----------------------	--	---	---	--	----

CRITERIA	0-1 Does not meet the required standards	2 – Meets the required standards	3 – Partially exceeds the required standards	4 – Exceeds the required standards	TOTAL
VISUAL AIDS & TIMING (CCFO5)					
Physical & Electronic, e.g., posters, models, charts, video, computer simulation, PowerPoint slides.	• Presentation is too short or takes much longer than allocated time. • No visual aid used for the presentation, or the PowerPoint presentation is of a low quality	• Poor PowerPoint presentation, distracts the audience, adds nothing to the presentation. • Presentation is somewhat close to the allocated time.	• PowerPoint presentation is relevant to topic and enhances understanding and explanation. • Length of presentation close to allocated time.	• PowerPoint presentation supports and enhances the understanding and explanation of the topic. • Length of presentation close to allocated time.	/4

CRITERIA	0-1 Does not meet the required standards	2 – Meets the required standards	3 – Partially exceeds the required standards	4 – Exceeds the required standards	TOTAL
SUBJECT KNOWLEDGE (CCFO1; CCFO4)					
	- Demonstrates no understanding of concepts. - Is unable to answer any questions, when required.	- Demonstrates limited understanding of concepts. - Has difficulty answering questions.	- Demonstrates adequate understanding of concepts. - Able to answer most questions.	- Demonstrates deep understanding of concepts. - Is able to provide in- depth explanations in response to all questions.	/4
GENERAL LECTURER FEEDBACK:

ANNEXURE E

PROFESSIONAL CONDUCT IN THE WORKPLACE

1. Introduction

This learning unit is designed to highlight [transferable skills](#) which are necessary to succeed in the [21st century workplace](#). These skills include teamwork, critical thinking, high-level problem-solving, communication, self-management, and career readiness.

After completing this learning unit, you should be able to:

- Conduct yourself professionally in the workplace;
- Apply appropriate interpersonal skills in a professional context;
- Develop yourself and promote your career.

There are short videos and links embedded throughout the learning unit directing you to more readings on important topics. These are designed to give you a deeper understanding of some of the terms and terminology that you will encounter in this learning unit, as well as the circumstances that you may encounter as you enter the workplace.

2. Progressing from student-life to work-life

In the South African economy, employment opportunities are available in a range of very different organisations such as local government, public administration, the banking industry, private business, non-profit organisations, and small, medium, and micro-sized enterprises (SMME). Each of these potential employers have their own rules, expectations and organisational cultures. This means that you, as a new employee, would need to adapt and fit into this new environment.

The Future: How to create opportunities from change

[Source](#)

Run time: 1:50

As you move into the workplace, it is your responsibility to manage yourself. When you were at school, somebody actively looked after you (your parents and teachers); at university you were encouraged to explore your identities and given more freedom of choice in your lives. However, you still had parents and lecturers who provided support and guided you.

Once you enter the world of work, you are expected to behave in certain ways and be professional, efficient and effective in your role as an employee. Any actions you choose to follow will have consequences (both good and bad). It is your responsibility to ensure you follow any instructions from your line managers and take control of your own performance and reputation.

Your first line of responsibility before moving into the workplace will be to secure interviews for yourself. [Compile](#) your curriculum vitae (CV) and include some specific information that would showcase your abilities and your educational achievements. Some information is considered irrelevant and should be [excluded](#) from your CV for various reasons. There are many CV templates on the internet that you can choose from. If you are applying for jobs that are predominantly in a corporate environment, then your CV should be simple and reflect the formality of the company. However, if you will be applying for jobs with an arty or creative edge then your CV can be much more elaborate and colourful.

You could hear of potential jobs through various channels, such as:

- Word of mouth – someone you know may hear about a vacancy and pass on the information.
- Media – newspapers and the internet have thousands of jobs advertised.
- LinkedIn – create your own professional profile and upload your CV. Make connections and network in your chosen field.
- Recruitment companies.

It is important to be professional in your job search and this includes professional email addresses. Email addresses which do not portray you as an employee with integrity should not be used. An email address such as IwantToParty@gmail.com or tequila@yahoo.com will not give a good first impression of you and may be considered junk mail and never be seen by the person who the email is addressed to. Choose a professional looking email address e.g. Vusi.Molefe@gmail.com.

Each year you will have a meeting with your line manager or someone who manages your performance. This is normally called a Performance Review and will have a number of Key Performance Areas (KPA's) which your performance is measured against. You will be notified of these when you enter the workplace and relate to the job profile that you work in. These are reviewed annually as you grow in your job and take on more responsibility. Your salary increases will most probably be based on your KPA score.

One of the most important areas for you to attend to is meeting deadlines. Businesses function on the timeous delivery of their products and services and in most cases the deadlines cannot be extended. Think about your salary, you expect to be paid at the same time every month. What would happen if someone missed a deadline and you were paid a week later or even worse, never received it? Often the work you will be required to complete by a deadline needs to move on to another person or department and if you miss your deadline then you are holding up the process and putting those other employees under pressure to meet their deadlines.

3. Behaviour in the workplace

Your new employer would expect you to conduct yourself professionally and ethically from the first day.

Professionalism at the workplace

[Source](#)

Run time: 1:44

Most employers will have an induction programme for new employees, where you will get an introduction into the sections and operations of your new environment. It is a good idea to be prepared and make the most of learning about your new work environment during the induction. But, there is far more that you would need to do and learn. This will help you to understand what is expected of you and what is seen as appropriate behaviour. When you start working in a new position, make sure you know what the [organisation's culture](#) is.

The more you understand your new work environment, the sooner you will be able to fit right in.

[Source](#)

These key skills are also referred to as [interpersonal skills](#) or [soft skills in the workplace](#). Let us look a bit closer at each of these key skills:

3.1. **Communication skills**

Communication in the workplace must always be professional. It can never be on the same informal level as at home or with friends. If your office environment has a policy that English is the language of business, adhere to it. Professional communication at work includes language proficiency, reading, writing, problem-solving, and the use of information technologies.

Both written and oral communication in the workplace must always be professional. There are many books and articles written on the dos and don'ts of office communication. Here are some of the most important ones:

Communication Dos and Don'ts:

DO	DON'T
Develop your " business vocabulary ":	Never use poor grammar or slang.
Texting in the workplace should only be done when it is absolutely necessary. This article on texting language . May be helpful on how to do this.	Never use the abbreviated language that you use with your friends on social media.
Listen to the presentations of your managers and research terms and terminology pertaining to your environment with which you are not familiar.	Refrain from using inappropriate phrases or any form of sexist, racist or heteronormative language .
Make use of a spelling and grammar checker when typing emails, reports and letters.	Do not let anger or frustration reflect in the tone of your verbal or written communication. Do not use CAPITAL LETTERS, bold font, slang or emoticons to indicate frustration.
Use the correct letterheads, stationery and templates for official business communication and refrain from using them for personal use.	Never gossip or constantly complain about trivial matters or use abrasive language.

But what about [nonverbal communication in the workplace](#)? Actions such as a facial expression, eye contact, gestures and posture communicate far more than you could realise. It could even include the way you dress. Together with verbal communication, nonverbal communication may be used as important cues to strengthen the message. As a new employee you should be aware how your nonverbal cues can be interpreted.

Consider the following scenario:

Your manager asks you to compile a report and then present this report at a meeting. This task provides you with a number of opportunities to showcase your abilities, work ethic, and performance. What choices would you need to make?

There are many considerations, but those listed below are some of the important ones:

- Communication:
 - The language used in your report. Is it suitable for the audience you will be presenting to?
 - Verbal and non-verbal communication skills.
- Appearance:
 - The clothes you will be wearing to do the presentation. This should again be appropriate for the audience and the occasion.
 - It is not advisable to chew gum in an office environment if you are expected to have face-to-face meetings with people or do presentations.

If you are unsure of what you are expected to do, then ask for assistance. Your manager would rather you do this than have a presentation which is not fit for purpose or lacks vital information.

3.1.1. Meetings

Conducting yourself professionally and actively participating in business meetings would require a good understanding of the different types of meetings, their purpose and structure. The business environment generally has regular meetings for a range of business reasons.

Some examples are:

- Staff meetings;
- Product meetings;
- Stakeholder meetings;
- Committee meetings.

Communication in these meetings follows strict [meeting protocols](#). It is also a good idea to take notes during meetings, especially if they are used to allocate work and responsibilities.

3.1.2. Telephone Etiquette

You will be required to be professional in your telephone communication. It is good business practice to state your name when answering your phone. Be polite and take notes if you are being requested to do tasks or pass on a message. Getting the message communicated correctly is an important function in the workplace. Knowledge of [Business phone etiquette](#) will assist you in dealing with clients, suppliers and associates in a professional way that will promote both your image and your organisation's reputation.

Another important consideration is your phone's ringtone. Keep it simple and professional.

3.2. Teamwork and group work

At work, you will be required to work with people, either formally in teams or informally by sharing office environments. Your success will depend on cooperation with individuals and groups. You need a special set of skills when working on a one-on-one situation or in teams. This will require people skills:

Creating Value through People Skills ([Source](#))

To be a good team member, you would need to:

- Build a good rapport with other team members;
- Improve your listening skills;
- Develop speaking and presentation skills;
- Communicate to different audiences;
- Respect diversity;
- Give and receive criticism more effectively without being offensive or taking the criticism personally;
- Be assertive and diligent;

- Resolve conflict and deal with difficult people;
- Develop negotiation skills;
- Build leadership skills.

Many of these skills will be developed over time as you build experience in the workplace and receive further training.

3.2.1 Office politics and social protocols

All offices and organisations will experience office politics. There are many reasons why most work environments go through stages where office politics can cause problems. There are many reasons why these problems may surface and why this should be carefully managed.

Some of the reasons include:

- Employees aspiring to be noticed;
- Employees overstep and cross boundaries and their authority;
- Employees lack supervision and control in the workplace;
- Gossip at work leads to poor office politics;
- Jealous colleagues (professional jealousy) or people who perceive others as a threat.

As a professional, you are responsible for managing difficult situations. [How can professional jealousy be prevented?](#)

You will be spending many hours at work. It is, therefore, important that these situations be handled with great care and professionalism to prevent conflict and to keep office relationships professional.

Dealing with differences in opinion and conflict is an important life skill to have, which can be effectively used in the workplace. It is important to regulate your emotions and not take other individuals' opinions personally. Do not email or phone anyone until you have thought through your response carefully and remove all emotions out of your communication. If you do not, you run the risk of inflaming the situation and coming across as volatile and unprofessional.

3.2.2. Professional networking

Networking with co-workers in the organisation and with professional bodies helps you to grow and develop your skills and career and build communities of practice. Social networking, such as creating professional profiles on LinkedIn, helps to open up opportunities, create awareness and build your professional portfolio.

4. Ethics, trust, honesty and integrity

Ethical behaviour means you are doing the right thing for the right reasons. e.g. not taking home office stationery, using the company's internet connectivity for personal use, gossiping about fellow employees, harassment and discrimination of any kind. There are various offences you could commit in the workplace for which you could possibly be fired. Many are related to ethics, such as stealing, revealing confidential information, insubordination, dereliction of duty, harassment and discrimination, etc.

You want to trust your employer and believe that they will always have your best interests at heart. Your professional conduct will create a mutual trust relationship at the organisation. This requires [ethical behaviour](#), knowing what is right and acting accordingly. Ethics is doing the right thing even when no one is watching.

The following are some pointers that will guide you towards creating this trust relationship:

- Never exaggerate on a [Curriculum Vitae](#) or add skills and qualifications that you do not have.
- Be punctual for meetings and appointments.
- Meet deadlines.
- Do what you said you would do and communicate immediately if you are not able to honour your commitments.
- Conform to the organisational culture and stick to the “rules”.
- Be open and honest with your colleagues and manager if something goes wrong. Do not lie.
- Respect your organisation, their resources and management.
- Sensitive information must be kept confidential. This includes any information about your salary or other forms of remuneration. You may not discuss with other employees how much you earn.
- Do not use the organisation's resources such as stationery, internet connectivity and telephones for personal purposes.

5. Managing professional spaces and appearances

One of the biggest adjustments that is required when bridging the stage of being an informal student to a professional in the workplace is the dress code. Would you trust a Bank Manager who wears dirty shoes, chews gum and uses informal language or slang? You must dress for success – you must look the part if you want to succeed. Dressing appropriately will boost your self-confidence. Read this article for more information: [20 Personal Appearances Tips for the Workplace](#).

In open office environments, it is particularly important to consider your colleagues in the shared space. These are some of the areas that can cause conflict:

- Noise - Do not talk too loudly as you may distract your colleagues from their work. It is very difficult to concentrate when there is too much noise.
- Temperature - Do not adjust the temperature of the air conditioner. These are normally set at a standard temperature which is considered comfortable for the majority of people. This is around 23 degrees. If you feel too hot or cold, then plan to adjust your personal space (an extra jersey, lap blanket, or a desk fan) to your comfort level.
- Neatness - Keep your office area neat and organised. You may be permitted to personalise your area with photographs or other small items. Keep these to the minimum so they do not intrude on your workspace. All décor must be appropriate and portray a professional image.
- Smells – Keep the smelly food for home. Your colleagues may not appreciate your tuna or garlic-laced lunch.

6. Behaviour and conduct outside of working hours

Your conduct outside of office hours is as important as your conduct during working hours. This is also true for your online behaviour. Recruiters and companies often scrutinise online social media and behaviour when they decide on the suitability of a candidate. If you are irresponsible and post inappropriate pictures or comments, it may cost you your job.

The following are actions on social media that may have dire consequences for you as an employee:

- Making negative comments about your manager, your colleagues or the organisation;
- Making derogatory comments or commenting on controversial social media posts;
- Mentioning salaries, complaining about your salary or new job offers;
- Sharing photos of wild parties, alcohol consumption and nudity;
- Making threats online, even jokingly.

The conduct and standards expected for online communication is often referred to as [Netiquette](#).

7. Contracts and legal matters

When you start working either permanently, as an intern or as a contract employee, you need to know what your responsibilities and rights are in advance. The very first document you will be expected to sign will be your conditions of service for employment. These are normally standard for colleagues in the same or similar positions but could have been customised to include additional responsibilities as the job requires. Read your contracts carefully before signing them, as by signing them, you acknowledge that you are accepting the tasks specified. Ask if you do not understand certain clauses and information.

8. In Closing

It is better to be well prepared and have the appropriate expectations when you enter the job market. In this learning unit we introduced some areas that will assist you in this preparation. It is also important to realise that we live in a fast-paced world where technology, information and situations constantly change.

In summary, make sure that you always stay informed and well-prepared, keep records and conduct yourself in a way that will grow your opportunities to your long-term advantage.
